Reliably open your Nordic Center with as little as
50 hours of snowmaking

The Super Blizzard is a portable, self contained snowmaking system that allows you to make snow at a high capacity without the prohibitive upfront capital cost associated with conventional snowmaking systems. This machine is for the serious snowmaker with a real job to do!

The Super Blizzard converts between 17 and 35 gallons per minute of water into snow using the same patented "HKD" snowmaking technology developed by Snow Economics, Inc. and used by ski resorts around the world.

Ski resorts rely on our technology to get open and to maintain a quality snow surface on their trails throughout the winter. Now you can too, with the portability and economy that you require.

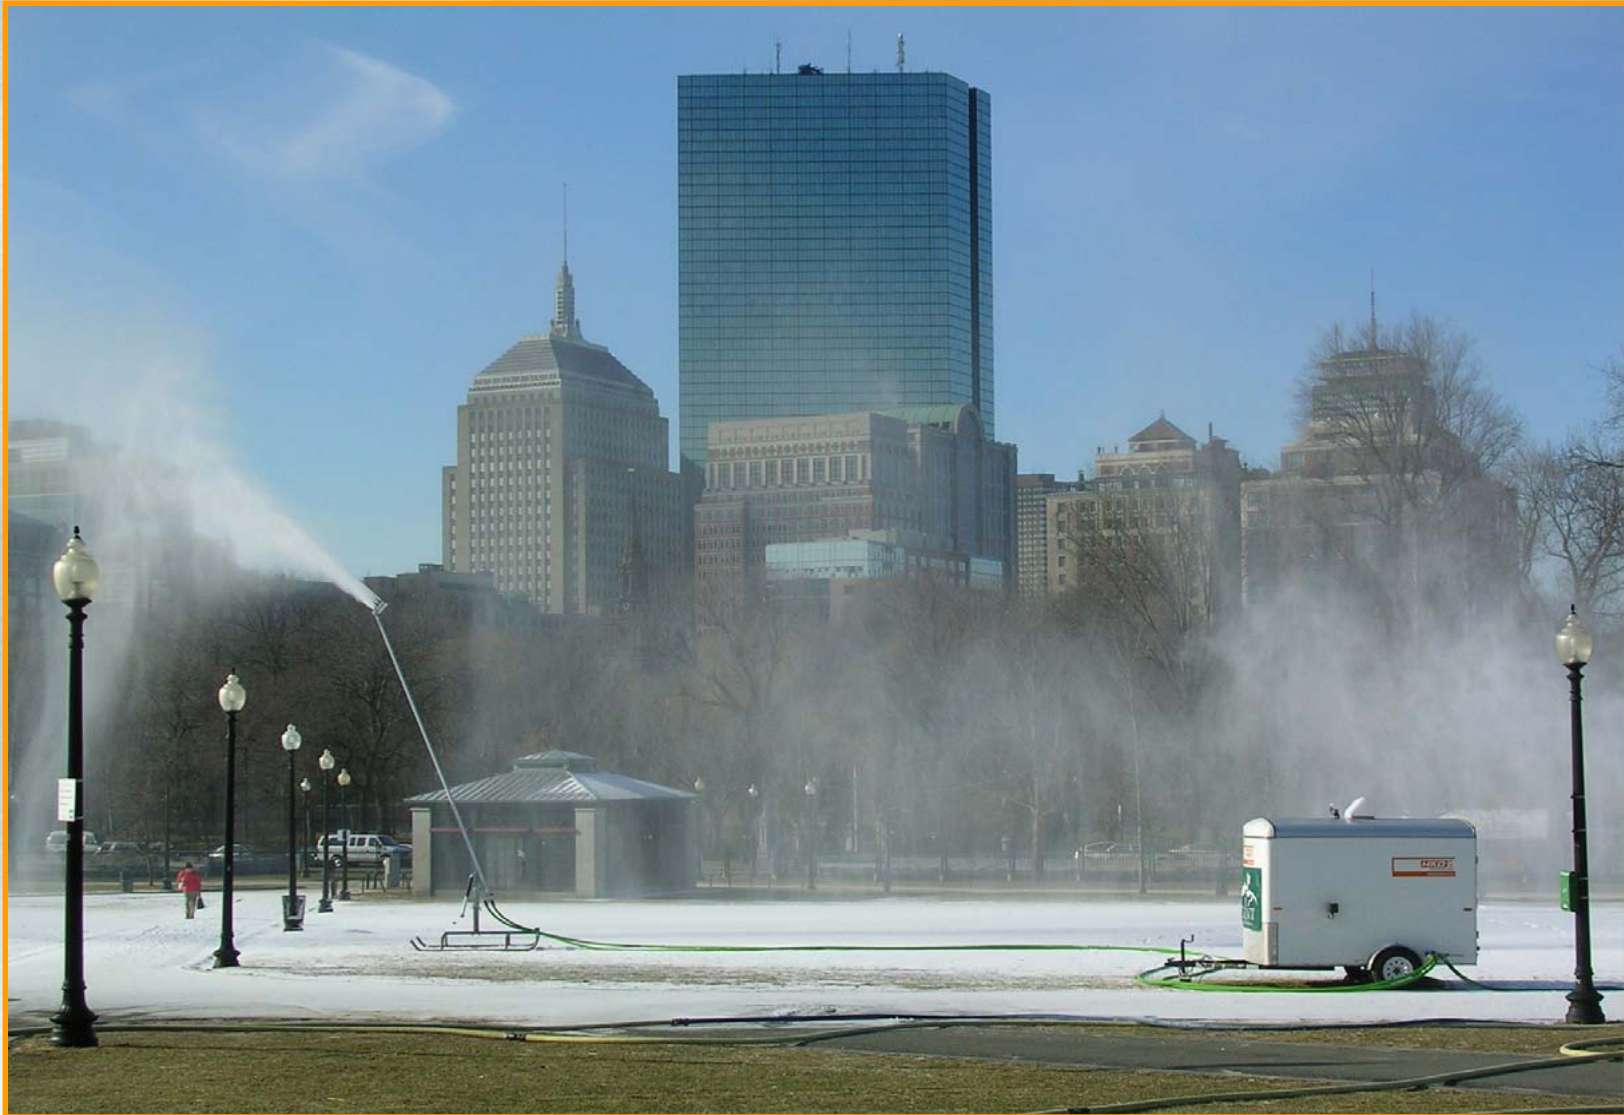

The machine is efficiently laid out in the protected environment of a 6' x 10' enclosed trailer, road ready with ball hitch. This allows for easy transport to and from the action.

The Super Blizzard comes equipped with a high quality electric power plant including a 10 HP Hydro-vein Air Compressor and 20 HP Water Pump. All components are designed for the long haul, capable of running uninterrupted for days at a time.

The Snow Tower which is sled mounted is fed by 100 foot long snowmaking hoses which are included to keep trailer moving to a minimum. Additional hose can be added to stretch the coverage capability of the machine.

Pull the trailer within 50 feet of a pond, stream, or hydrant then hook up the hoses and start making snow!

At temperatures below 28 degrees F, the Super Blizzard will make enough snow to cover a kilometer of trail, 12 feet wide with 6" of snow in approximately 50 hours of snowmaking. Alternatively, in the same time frame, the machine could cover an open teaching or training area of approximately 2 acres with 6" of snow.
